Abstract

- This is the abstract for this article. If you are 2 making your code available, do not link to it in 3 the abstract since many indexing services will 4 automatically remove or redact the link. In-5 stead, we are requiring every paper to have an 6 initial statement on data and code availability 7
- right after the abstract. 8

Keywords: List of keywords

Data and Code Availability This initial para-10 graph is mandatory. Briefly state what data you 11 use (including citations if appropriate) and whether 12 and where the data are available to other researchers. 13 If you are not sharing code, you must explicitly state 14 that you are not making your code available. If you 15 are making your code available, then at the time of 16 submission for review, please include your code as 17 supplemental material or as a code repository link; in 18 either case, your code must be anonymized. If your 19 paper is accepted, then you should de-anonymize 20 your code for the camera-ready version of the paper. 21 If you do not include this data and code availability 22 statement for your paper, or you provide code that is 23 not anonymized at the time of submission, then your 24 paper will be desk-rejected. Your experiments later 25 could refer to this initial data and code availability 26 statement if it is helpful (e.g., to avoid restating what 27 data you use). 28

Institutional Review Board (IRB) This initial 29 paragraph is **mandatory**. If your research requires 30 IRB approval or has been designated by your IRB as 31 Not Human Subject Research, then for the camera-32 ready version of the paper, you must provide IRB 33 information (and at the time of submission for re-34 view, you can say that this IRB information will be 35

provided if the paper is accepted). If your research 36 does not require IRB approval, then you must state 37 this to be the case. 38

1. Introduction

Instructions This is the template for submissions to the **Proceedings Track** for the Machine Learning 41 for Health (ML4H) symposium 2025. Please note the 42 following requirements: 43

- 1. The submission in the Proceedings Paper Track 44 is limited to 8 pages (excluding references and 45 appendices). If your paper is accepted, one extra 46 page will be provided for the camera-ready. 47
- 2. Please, use the packages automatically loaded 48 (amsmath, amssymb, natbib, graphicx, url, algo-49 rithm2e) to manage references, write equations, 50 and include figures and algorithms. The use of 51 different packages could create problems in the 52 generation of the camera-ready version. Please, 53 follow the example provided in this file. 54
- 3. References must be included in a .bib file. 55
- 4. Please write your paper in a single .tex file.
- 5. The manuscript, data and code must be anonymized during the review process.
- 6. For writing guidelines please consider the offi-59 cial ML4H call for papers at https://ahli.cc/ 60 ml4h/call-for-papers/ 61

^{*} These authors contributed equally

This is a sample article that uses the *jmlr* class 62 with the wcp class option. Please follow the guide-63 lines in this sample document as it can help to re-64 duce complications when combining the articles into 65 a book. Please avoid using obsolete commands, such 66 as \rm, and obsolete packages, such as epsfig.¹ Some 67 packages that are known to cause problems for the 68 production editing process are checked for by the 69 jmlr class and will generate an error. (If you want 70

to know more about the production editing process, 71 have a look at the video tutorials for the produc-

72 tion editors at http://www.dickimaw-books.com/ 73

software/makejmlrbookgui/videos/.) 74

Please also ensure that your document will com-75 pile with PDFIATEX. If you have an error message 76 that's puzzling you, first check for it at the UK 77 TUG FAQ https://texfaq.org/FAQ-man-latex. 78 If that doesn't help, create a minimal working exam-79 ple (see https://www.dickimaw-books.com/latex/ 80

minexample/) and post to somewhere like T_{FX} on 81

StackExchange (http://tex.stackexchange.com/) 82

or the LATEX Community Forum (http://www. 83

latex-community.org/forum/). 84

NOTE: 85

- This is an numbered theorem-like environment that 86
- was defined in this document's preamble. 87

1.1. Sub-sections 88

Sub-sections are produced using \subsection. 89

1.1.1. SUB-SUB-SECTIONS 90

Sub-sub-sections produced using are 91 92 \subsubsection.

Sub-sub-sub-sections Sub-sub-sections are 93

produced using \paragraph. These are unnumbered 94 with a running head. 95

96 sections are produced using \subparagraph. These 97 are unnumbered with a running head. 98

2. Cross-Referencing ٩q

Always use \label and \ref (or one of the com-100 mands described below) when cross-referencing. 101 For example, the next section is Section 3 but you 102 can also refer to it using Section 3. The jmlr class 103

provides some convenient cross-referencing com-104 mands: \sectionref, \equationref, \tableref, 105 \figureref, \algorithmref, \theoremref, 106 \lemmaref. \remarkref. \corollaryref. 107 \definitionref, conjectureref, \axiomref , 108 \exampleref and \appendixref. The argument of 109 these commands may either be a single label or a 110 comma-separated list of labels. Examples: 111

Referencing sections: Section 3 or Sections 1 and 3 or Sections 1, 3, 5.1 and 5.2.

Referencing equations: Equation (1) or Equations (1) and (3) or Equations (1), (2), (3) and (4). 115

Referencing tables: Table 1 or Tables 1 and 2 or Tables 1, 2 and 3.

Referencing figures: Figure 1 or Figures 1 and 2 or 118 Figures 1, 2 and 3 or Figures 3(a) and 3(b). 119

Referencing algorithms: Algorithm 1 or Algo-120 rithms 1 and 2 or Algorithms 1, 2 and 3. 121

Referencing theorem-like environments: Theo-122 rem 1, Lemma 2, Remark 3, Corollary 4, Definition 5, 123 Conjecture 6, Axiom 7 and Example 1. 124

Referencing appendices: Appendix A or Appen-125 dices A and B. 126

3. Equations

127

134

112

113

114

116

117

The jmlr class loads the amsmath package, so you can 128 use any of the commands and environments defined 129 there. (See the amsmath documentation for further 130 $details.^2$) 131

Unnumbered single-lined equations should be dis-132 played using [and]. For example: 133

 $E = mc^2$

or you can use the displaymath environment:

 $E = mc^2$

Numbered single-line equations should be displayed 135 using the equation environment. For example: 136

$$\cos^2\theta + \sin^2\theta \equiv 1 \tag{1}$$

This can be referenced using \label and 137 **\equationref.** For example, Equation (1). 138

^{1.} See http://www.ctan.org/pkg/l2tabu

^{2.} Either texdoc amsmath or http://www.ctan.org/pkg/ amsmath

Multi-lined numbered equations should be dis-139 played using the align environment.³ For example: 140

$$f(x) = x^2 + x \tag{2}$$

$$f'(x) = 2x + 1 \tag{3}$$

Unnumbered multi-lined equations can be displayed 141 using the align* environment. For example: 142

$$f(x) = (x+1)(x-1) = x^2 - 1$$

If you want to mix numbered with unnumbered lines 143 use the align environment and suppress unwanted 144 line numbers with \nonumber. For example: 145

$$y = x^{2} + 3x - 2x + 1$$

= $x^{2} + x + 1$ (4)

An equation that is too long to fit on a single line 146 can be displayed using the **split** environment. Text 147 can be embedded in an equation using \text or 148 \intertext (as used in Theorem 1). See the ams-149 math documentation for further details. 150

3.1. Operator Names 151

Predefined operator names are listed in Ta-152 ble 1. For additional operators, either use 153 **\operatorname**, for example var(X) or declare it 154 with \DeclareMathOperator, for example 155

\DeclareMathOperator{\var}{var} 156

and then use this new command. If you want 157 limits that go above and below the operator (like 158 \sum) use the starred versions (\operatorname* or 159 \DeclareMathOperator*). 160

4. Vectors and Sets 161

Vectors should be typeset using \vec. For example 162 x. (The original version of \vec can also be accessed 163 using $\ crgvec$, for example \vec{x} .) The jmlr class also 164 provides st to typeset a set. For example S. 165

5. Floats

Floats, such as figures, tables and algorithms, are 167 moving objects and are supposed to float to the near-168 est convenient location. Please don't force them to 169 go in a particular place. In general it's best to use 170 the htbp specifier and don't put the figure or table in 171 the middle of a paragraph (that is make sure there's 172 a paragraph break above and below the float). Floats 173 are supposed to have a little extra space above and 174 below them to make them stand out from the rest of 175 the text. This extra spacing is put in automatically 176 and shouldn't need modifying. 177

If your article will later be reprinted in the Chal-178 lenges for Machine Learning, please be aware that 179 the CiML books use a different paper size, so if you 180 want to resize any images use a scale relative to the 181 line width (\linewidth), text width (\textwidth) 182 or text height (\textheight). 183

To ensure consistency, please don't try changing 184 the format of the caption by doing something like: 185

<pre>\caption{\textit{A Sample Caption.}}</pre>	186
or	187
<pre>\caption{\em A Sample Caption.}</pre>	188
You can, of course, change the font for individual words or phrases, for example:	189
words or phrases, for example.	190

\caption{A Sample Caption With Some \emphasized Words

5.1. Tables

Tables should go in the table environment. Within 193 this environment use \floatconts (defined by jmlr) 194 to set the caption correctly and center the table con-195 tents. The location of the caption depends on the 196 tablecaption setting in the document class options. 197

If you want horizontal rules you can use the 198 booktabs package which provides the commands 199 \toprule, \midrule and \bottomrule. For exam-200 ple, see Table 3. 201

If you really want vertical lines as well, you can't 202 use the booktabs commands as there'll be some un-203 wanted gaps. Instead you can use LATEX's \hline, 204 but the rows may appear a bit cramped. You can add 205 extra space above or below a row using \abovestrut 206 and \belowstrut. For example, see Table 4. How-207 ever, you might want to read the booktabs documen-208 tation regarding the use of vertical lines. 209

166

192

^{3.} For reasons why you shouldn't use the obsolete eqnarray environment, see Lars Madsen, Avoid equarray! TUGboat 33(1):21-25, 2012.

Data3	0.54321
Data4	0.09876

Dataset	Result
Data1	0.12345
Data2	0.67890
Data3	0.54321
Data4	0.09876

Table 4: A Table With Horizontal and Vertical Lines

Dataset	Result
Data1	0.12345
Data2	0.67890
Data3	0.54321
Data4	0.09876

If you want to align numbers on their decimal 210 point, you can use the siunitx package. For further 211 details see the siunitx documentation⁴. 212

If the table is too wide, you can adjust the intercolumn spacing by changing the value of **\tabcolsep**. 214 For example: 215

216

223

\setlength{\tabcolsep}{3pt}

If the table is very wide but not very long, you can use the sidewaystable environment defined in the rotating package (so use \usepackage{rotating}). ²¹⁹ If the table is too long to fit on a page, you can use the longtable environment defined in the longtable package (so use \usepackage{longtable}). ²²²

5.2. Figures

Figures should go in the figure environment. Within 224 this environment, use \floatconts to correctly po-225 sition the caption and center the image. Use 226 \includegraphics for external graphics files but 227 omit the file extension. Do not use \epsfig or 228 \psfig. If you want to scale the image, it's better 229 to use a fraction of the line width rather than an 230 explicit length. For example, see Figure 1. 231

Figure 1: Example Image

If your image is made up of LATEX code (for example, commands provided by the pgf package) you 233

Either texdoc siunitx or http://www.ctan.org/pkg/ siunitx

234 can include it using \includeteximage (defined by

the jmlr class). This can be scaled and rotated in the
same way as \includegraphics. For example, see
Figure 2.

Figure 3: An Example With Sub-Figures.

Figure 4: Another Example With Sub-Figures.

Figure 2: Image Created Using LATEX Code

If the figure is too wide to fit on the page, you can
use the sidewaysfigure environment defined in the
rotating package.

²⁴¹ Don't use \graphicspath.⁵ If the im²⁴² ages are contained in a subdirectory, specify
²⁴³ this when you include the image, for example
²⁴⁴ \includegraphics{figures/mypic}.

245 5.2.1. SUB-FIGURES

Sub-figures can be created using \subfigure, which 246 is defined by the *jmlr* class. The optional argument 247 allows you to provide a subcaption. The label should 248 be placed in the mandatory argument of \subfigure. 249 You can reference the entire figure, for example Fig-250 ure 3, or you can reference part of the figure using 251 \figureref, for example Figure 3(a). Alternatively 252 you can reference the subfigure using \subfigref, for 253 example (a) and (b) in Figure 3. 254

By default, the sub-figures are aligned on the baseline. This can be changed using the second optional argument of \subfigure . This may be t (top), c (centered) or b (bottom). For example, the subfigures (*a*) and (*b*) in Figure 4 both have [c] as the second optional argument.

5.3. Sub-Tables

There is an analogous command \subtable for subtables. It has the same syntax as \subfigure described above. You can reference the table using \tableref , for example Table 5 or you can reference part of the table, for example Table 5(*a*). 266 Alternatively you can reference the subtable using \subtabref , for example (*a*) and (*b*) in Table 5. 268

261

275

Table 5: An Example With Sub-Tables

(a)		()	(b)		
Α	В	\mathbf{C}	D		
1	2	3	4		
		5	6		

By default, the sub-tables are aligned on the top. 269 This can be changed using the second optional argument of $\$ but able. This may be t (top), c (centered) or b (bottom). For example, the sub-tables 272 (a) and (b) in Table 6 both have [c] as the second 273 optional argument. 274

5.4. Algorithms

Enumerated textual algorithms can be displayed using the algorithm environment. Within this environment, use \caption to set the caption and you can use an enumerate or nested enumerate environ-277

^{5.} This is specific to the jmlr class, not a general recommendation. The main file that generates the proceedings or the CiML book is typically in a different directory to the imported articles, so it modifies the graphics path when it imports an article.

Table 6: Another Example With Sub-Tables

(a)	(b)
$\mathbf{A}^{(}$	\mathbf{B}	\mathbf{C}	D
	_	3	4
1	2	5	6

ments. For example, see Algorithm 1. Note that
algorithms float like figures and tables.

Algorithm 1: The Gauss-Seidel Algorithm

1. For k = 1 to maximum number of iterations

(a) For i = 1 to ni. $x_i^{(k)} = \frac{b_i - \sum_{j=1}^{i-1} a_{ij} x_j^{(k)} - \sum_{j=i+1}^{n} a_{ij} x_j^{(k-1)}}{a_{ii}}$ ii. If $\|\boldsymbol{x}^{(k)} - \boldsymbol{x}^{(k-1)} < \epsilon\|$, where ϵ is a specified stopping criteria, stop.

If you'd rather have the same numbering throughout the algorithm but still want the convenient indentation of nested enumerate environments, you can use the enumerate* environment provided by the jmlr class. For example, see Algorithm 2.

 $\frac{\text{Algorithm 2: Moore's Shortest Path}}{\text{Given a connected graph } G, where the length of each edge is 1:}$

1. Set the label of vertex s to 0

- 2. Set i = 0
 - 3. Locate all unlabelled vertices adjacent to a vertex labelled i and label them i + 1
 - 4. If vertex t has been labelled,

the shortest path can be found by backtracking, and the length is given by the label of t.

otherwise

increment i and return to step 3

287 Pseudo code can be displayed using the
288 algorithm2e environment. This is defined by
289 the algorithm2e package (which is automatically

loaded) so check the algorithm2e documentation for ²⁹⁰ further details.⁶ For an example, see Algorithm 3. ²⁹¹

Algorithm 3: Computing Net Activation
Input: $x_1, \ldots, x_n, w_1, \ldots, w_n$
Output: y , the net activation
$y \leftarrow 0;$
for $i \leftarrow 1$ to n do
$y \leftarrow y + w_i * x_i;$
end

6. Description Lists

The jmlr class also provides a description-like environment called altdescription. This has an argument that should be the widest label in the list. Compare: 295

add A method that adds two variables.

differentiate A method that differentiates a function. 297

with

add	A method that adds two variables.	300 301
differentiate	A method that differentiates a function.	302 303

7. Theorems, Lemmas etc

304

292

296

200

The following theorem-like environments are predefined by the jmlr class: theorem, example, lemma, proposition, remark, corollary, definition, conjecture and axiom. You can use the proof environment to display the proof if need be, as in Theorem 1.

Theorem 1 (Eigenvalue Powers) If λ is an $_{311}$ eigenvalue of **B** with eigenvector $\boldsymbol{\xi}$, then λ^n is an $_{312}$ eigenvalue of \boldsymbol{B}^n with eigenvector $\boldsymbol{\xi}$.

Proof Let λ be an eigenvalue of **B** with eigenvector ³¹⁴ ξ , then ³¹⁵

 $B\xi = \lambda \xi$

Either texdoc algorithm2e or http://www.ctan.org/ pkg/algorithm2e

 $_{316}$ premultiply by **B**:

$$BB\xi = B\lambda\xi$$

$$\Rightarrow B^{2}\xi = \lambda B\xi$$

$$= \lambda\lambda\xi \qquad since \ B\xi = \lambda\xi$$

$$= \lambda^{2}\xi$$

317 Therefore true for n = 2. Now assume true for n = k:

$$B^k \boldsymbol{\xi} = \lambda^k \boldsymbol{\xi}$$

 $_{318}$ premultiply by **B**:

$$BB^{k} \boldsymbol{\xi} = B\lambda^{k} \boldsymbol{\xi}$$

$$\Rightarrow B^{k+1} \boldsymbol{\xi} = \lambda^{k} B \boldsymbol{\xi}$$

$$= \lambda^{k} \lambda \boldsymbol{\xi} \qquad since \ B \boldsymbol{\xi} = \lambda \boldsymbol{\xi}$$

$$= \lambda^{k+1} \boldsymbol{\xi}$$

- Therefore true for n = k+1. Therefore, by induction, true for all n.
- ³²¹ Lemma 2 (A Sample Lemma) This is a lemma.
- Remark 3 (A Sample Remark) This is a remark.
- Corollary 4 (A Sample Corollary) This is a
 corollary.

Definition 5 (A Sample Definition) This is a definition.

³²⁸ Conjecture 6 (A Sample Conjecture) This is ³²⁹ a conjecture.

- 330 Axiom 7 (A Sample Axiom) This is an axiom.
- ³³¹ Example 1 (An Example) This is an example.

332 8. Color vs Grayscale

It's helpful if authors supply grayscale versions of 333 their images in the event that the article is to be 334 incorporated into a black and white printed book. 335 With external PDF, PNG or JPG graphic files, 336 you just need to supply a gravscale version of the 337 file. For example, if the file is called myimage.png, 338 then the gray version should be myimage-gray.png 339 or myimage-gray.pdf or myimage-gray.jpg. You 340 don't need to modify your code. The jmlr class checks 341

for the existence of the grayscale version if it is print mode (provided you have used \includegraphics and haven't specified the file extension). 344

345

346

347

348

353

354

355

356

357

358

374

379

You can use \ifprint to determine which mode you are in. For example, in Figure 1, the purple ellipse represents an input and the yellow ellipse represents an output. Another example: important text!

You can use the class option gray to see how the document will appear in gray scale mode. Colored text will automatically be converted to gray scale in print mode. 350

The jmlr class loads the xcolor package, so you can also define your own colors. For example: XYZ.

The xcolor class is loaded with the x11names option, so you can use any of the x11 predefined colors (listed in the xcolor documentation⁷).

9. Citations and Bibliography

The jmlr class automatically loads natbib and auto-359 matically sets the bibliography style, so you don't 360 need to use \bibliographystyle. This sample file 361 has the citations defined in the accompanying Bib-362 TeX file jmlr-sample.bib. For a parenthetical cita-363 tion use \citep. For example (Guyon and Elisseeff, 364 2003). For a textual citation use \citet. For exam-365 ple Guyon et al. (2007). Both commands may take a 366 comma-separated list, for example Guyon and Elis-367 seeff (2003); Guyon et al. (2007). 368

These commands have optional arguments and have a starred version. See the natbib documentation for further details.⁸ 370

The bibliography is displayed using 372 \bibliography. 373

Acknowledgments

Acknowledgments go here but should only appear in the camera-ready version of the paper if it is accepted. Acknowledgments do not count toward the paper page limit. 378
